RIMA DEBNATH

UX PRODUCT OWNER

rimadebnath.connect@gmail.com | +91 9779423357

linkedin.com/in/rima-debnath-0208ar | rima-portfolio-teal.vercel.app | github.com/Rimadebnath

PROFESSIONAL SUMMARY

UX Product Owner who takes products from discovery to delivery: user research, usability testing, requirements elicitation, backlog ownership, user stories with acceptance criteria, user journeys, object models and AI-assisted coded prototypes. Works in Agile/Scrum with clients and engineers to align stakeholders, balance user needs, business goals and delivery constraints, and keep the product coherent through fast iteration.

CORE COMPETENCIES

Product Ownership & Discovery: Product discovery, continuous discovery, problem framing, product roadmap, release planning, backlog ownership and grooming, MoSCoW prioritisation, user stories, acceptance criteria, scope management, trade-off decisions, stakeholder alignment.

Business Analysis: Requirements elicitation, stakeholder analysis, BRD/FRD, use cases, process mapping, gap analysis, impact analysis, feasibility assessment, requirements traceability, change control, user acceptance testing (UAT).

UX Research & Systems Thinking: User research, user interviews, research synthesis, usability testing, competitor analysis, journey mapping, information architecture, object modelling, wireframing, high-fidelity and coded prototyping, design system architecture, pattern libraries.

Agile Delivery & Tools: Agile, Scrum, sprint planning, sprint reviews, sprint retrospectives, story points, research spikes, engineering collaboration, Figma, Figma AI, Claude, Jira, Notion, Storybook, React, HTML/CSS/JavaScript, Python, SQL, Git/GitHub, Excel, UiPath.

PROFESSIONAL EXPERIENCE

Product Builder / UX Product Owner (Freelance)

Client projects | Mar 2026 - Present

- Owned the Foodbank donation app from client brief to launch, turning the donation problem into a prioritised MoSCoW release backlog, user stories, acceptance criteria, use cases, object model, information architecture and an end-to-end user journey.
- Ran backlog grooming and change control through sprint reviews with the client, weighing user value, business goals, dependencies and delivery constraints before reprioritising scope.
- Merged amount selection and payment into one screen and built an AI-assisted coded prototype for a three-tap donation journey. The client reported about 20% more traffic after launch.
- Tested the flow end to end through manual testing with users and error handling (try/catch) in code, fixing issues before handover.

AI Operations & Quality Specialist (Apple Project)

Teleperformance | Designation: Customer Care Executive | Nov 2024 - Mar 2025

- Reviewed and ranked AI assistant responses against Apple quality guidelines, judging relevance, accuracy and clarity to improve natural language processing (NLP) answer quality.
- Applied human judgment where AI responses were unclear or off-guideline, and turned recurring agent confusion points into an answer selection guide with real examples for trainers and QA, contributing to the team's 25% accuracy target.

Software Developer Intern (acting Junior Business Analyst)

Centelli, Panchkula | Sep 2023 - Feb 2024

- Elicited client requirements and assessed feasibility for a UK hotel chain’s booking-confirmation automation; documented BRD/FRD requirements, maintained change records and collaborated with developers and the business analyst during sprint delivery.
- Built UiPath/Python automation to extract booking details from emailed PDFs into Excel and send confirmations, using anchors, regular expressions and exception handling, cutting manual handling time by about 40%.
- Created and executed manual and black-box test cases with QA, then led client user acceptance testing (UAT) through delivery sign-off.

Full Stack Developer Intern (acting Product Owner)

Captur Advisors | Aug 2021 - Jan 2022

- Ran user research with about 80 crypto users and 15 in-depth interviews for AntrixMesh, then synthesised findings and competitor analysis into prioritised backlog items such as wallet-based sign-in.
- Ran feasibility and impact analysis (scope, cost, timeline, risk, team capacity) when the client asked for a full Web3 pivot mid-build, and proposed a two-phase roadmap the client approved, so Phase 1 shipped on time.
- Defined requirements, MoSCoW priorities, user stories and acceptance criteria, and owned backlog refinement across two-week Scrum sprints (sprint planning, sprint reviews, retrospectives, story points).
- Led front-end delivery of a React/Leaflet crypto news heat map with automated RSS/Python updates, ran usability tests of the prototype with users, and explored MetaMask sign-in with Solidity, Truffle and Ganache for Phase 2.

SELECTED PRODUCT CASE STUDIES

Foodbank Donation App

Freelance client project | 2026 | foodbank-case-study.vercel.app

- Case study covering the MoSCoW release backlog, acceptance criteria, one-screen donation flow, AI-assisted coded prototype and testing.

AntrixMesh

Business analysis & product ownership case study | 2021 | antrixmesh-case-study.vercel.app

- Case study covering research synthesis, usability testing, feasibility and impact analysis of a mid-build Web3 pivot, and the client-approved two-phase roadmap.

Leave Management System (LMS)

Portfolio case study / coded prototype | 2026 | lms-product-design-case-study.vercel.app

- Mapped employee and manager workflows for leave requests, approval queues, leave balance rules, conflict detection and status tracking, then built a coded prototype and refined it through usability tests with users.

Commerce Design System

Design system & Storybook | 2026 | riimadebnath-storybook.vercel.app

- Documented the design system architecture for a quick-commerce experience in Storybook, including foundations, design tokens, reusable components and page patterns.

EDUCATION & CERTIFICATIONS

B.E., Computer Science and Engineering | Chitkara University | 2020 - 2024 | CGPA: 9.15/10

Certifications: Microsoft Business Analyst; UiPath RPA Developer; Agile Fundamentals (Scrum); Google Project Management (in progress)
