RIMA DEBNATH

UX Product Owner

rimadebnath.connect@gmail.com | +91 9779423357 | LinkedIn | Portfolio

PROFESSIONAL SUMMARY

UX Product Owner with a Computer Science and full-stack development background, now focused on product design and ownership. I turn user problems into researched, prioritized specs, then carry them through to working prototypes myself. Comfortable owning the full thread from discovery to delivery, using AI tools to move faster without handing over the judgment calls.

CORE STRENGTHS

Product Ownership: Problem Framing, Prioritization, Roadmapping, Backlog & User Stories, Acceptance Criteria, Critical Thinking, Project Management, Project Planning & Lifecycle (SDLC)

Discovery & UX: User Research, Information Architecture, Wireframing & Prototyping, Design Systems, Empathy Mapping, Personas, Usability Testing, Feature Listing & Flowcharts, UX Design

Delivery & Process: Agile & Scrum, Sprint & Milestone Planning, Stakeholder Communication, Requirement Gathering & Traceability, Documentation (BRD/FRD), Gap Analysis, UAT, Risk Management, Client Handling, Time Management

Technical & AI: Figma, HTML/CSS/JS, Python, SQL, UiPath (RPA), AI-Assisted Workflows, API Knowledge, Jira, Notion, Excel

SELECTED PRODUCT & DESIGN WORK

Leave Management System (LMS) *Lead Product Design / Product Case Study | Figma, HTML/JS*

- Ran discovery with employees and managers, then prioritized the findings into a **backlog with clear acceptance criteria**.
- Turned that backlog into flows, wireframes and shared-service logic for the platform, including **conflict detection, overdraft warnings and audit trails**.
- Built a working **interactive prototype** in HTML and JS, alongside full Figma wireframes and a sitemap.

Foodbank Donation App *Product / UX Case Study | Figma | 7 weeks*

- Grounded the redesign in **user research** instead of assumptions, then built out the **information architecture, user flows, low-fidelity prototypes** and a small design system.

Blinkit-Inspired Commerce Design System *Design System / Storybook Documentation | Figma*

- Documented a quick-commerce **design system** covering foundations, components and homepage patterns, showing I can think in **systems** and not just individual screens.

Workflow Automation *Business Analysis Case Study | Medium*

- Looked into a failing manual onboarding process, mapped out the **requirements** and designed an **automation fix**.

PROFESSIONAL EXPERIENCE

Product Designer | Freelance / *March 2026 – Present*

- Design end-to-end product experiences and **interactive prototypes**, turning user problems and requirements into flows, wireframes, design systems and testable concepts.
- Apply **product ownership practices** like problem framing, prioritization, user stories and usability feedback, and use **AI tools** to move faster from concept to working prototype.
- Make the structural calls myself and only use AI to speed up execution. For example, I wireframed my own portfolio site from scratch and used **AI-assisted development** just to build it.
- My **CS and full-stack background** means the specs and wireframes I hand off are things an engineer can actually build from, not just pretty pictures.

Customer Care Executive – Apple Project | Teleperformance / *Nov 2024 – Mar 2025*

- Coordinated between Apple stakeholders and engineering to clarify requirements and support improvements to assistant functionality.
- Introduced updated **sprint roadmaps** that cut delivery bottlenecks by 30%, and led **UAT cycles** through sign-off, contributing to a 25% improvement in NLP accuracy.

Jr. Business Analyst / Software Developer Intern | Centelli, Panchkula / *Sep 2023 – Jan 2024*

- Ran process discovery sessions and turned the findings into detailed **BRDs and FRDs**, and worked with QA to write and run functional test cases.
- Automated data-entry workflows using **UiPath**, cutting manual hours by 40%, and used **SQL** to diagnose process issues, which increased throughput by 35%.

Full Stack Developer Intern | Captur Advisors / *Aug 2021 – Jan 2022*

- Built **ReactJS** interfaces for a blockchain data-visualization tool and automated data-scraping pipelines using Python and MongoDB. Took part in **Agile ceremonies and sprint retrospectives**.

EDUCATION

Bachelor of Engineering (Computer Science) — Chitkara University | 2020–2024 | CGPA: 9.15/10

CERTIFICATIONS

Google Project Management • Microsoft Business Analyst • UiPath RPA Developer • Agile Fundamentals (Scrum)
